MONTHLY RETAIL MARKETS AND PRODUCTION REPORT

Strong P5 production in October

Total requirements in September saw growth compared to September last year with a 5.5 per cent increase. On a 12-month basis, growth continues to be strong at 4.5 per cent. The same trend was seen in quota requirements for September.

At the P5 level on a 10-month basis, P5 is 0.7 per cent above the production forecast, with very strong production this fall. Looking at October, P5 is 3.5 per cent above the production forecast. Much of this increase is due to the strong fill rate of October's three incentive days which were filled a 49.4 per cent in October.

In October 2025, butter stocks reached 37,437 tonnes, up from September by eight tonnes. Butter stock forecast continues to be about halfway between the optimistic and average scenarios at this time, and levels continue to be at the highest seen in the

last five years. The stocks being slightly up from September indicates that the market wasn't as strong as was projected for Thanksgiving.

As a result of higher than projected butter stocks in October, quota at the P10 level is below what was projected while production is trending above forecast.

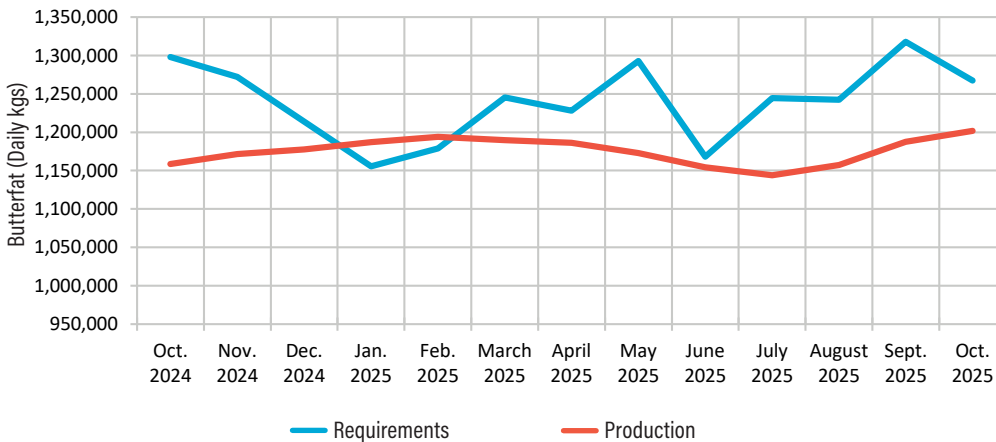

Cheese stock levels for the month of October 2025 were at 106,091 tonnes, up 1,041 tonnes from September and higher than the last five-year average.

For the 52-weeks ending November 1, 2025, sales for fluid milk, fluid cream, yogurt, ice cream, cheese and butter increased/decreased by -0.2, 0.5, 6.5, 6.5, 3.1 and 3.2 per cent, respectively.
